

Data Import

- `read.csv` defaults can be inconvenient

- Consider using the `readr` package
 - Creates a `tibble`, which is a modified data frame

- Can read from urls directly

- Packages for
 - Reading files from Excel, Google Sheets, Stata, SPSS, SAS, etc.
 - Interfacing with databases
 - Special data types, like JSON, XML
 - Interfacing with APIs

Data Export

Writing is similar to reading:

```
write.csv(mtcars,  
          file="output/mtcars.csv",  
          row.names=FALSE)
```
