

Regression

```
africa <- read.csv("data/africadata.csv")
```

```
lm(road ~ pop_2017 + gdp_2017, data=africa)
```

Call:

```
lm(formula = road ~ pop_2017 + gdp_2017, data = africa)
```

Coefficients:

(Intercept)	pop_2017	gdp_2017
1.517e+04	3.084e-04	9.920e-07

Regression

```
lm(y ~ x1 + x2, data=data_frame_name)
```

Intercept (constant) term gets added

Don't need to quote or prefix column names
