

# Subset

Subset for selecting rows or columns

```
subset(data.frame,  
       subset=condition for rows to keep,  
       select=columns to keep)
```

Don't have to quote variable names or prefix with name of the data frame

# Subset

```
subset(safi,  
       subset=village=="God",  
       select=c(village, years_liv, rooms))
```

	village	years_liv	rooms
1	God	4	1
2	God	9	1
3	God	15	1
4	God	6	1
5	God	40	1
6	God	3	1
7	God	38	1
11	God	20	1
12	God	20	3
