## EXECISE

Read in the SAFI data again (exercise A). Run the line to factor respondent\_wall\_type.

Using aggregate, find:

1) the average family size per village

2) average number of rooms in the dwelling per wall type and village (group on both)

Bonus: sort the second result by village, then wall type

## Exercise

Read in the SAFI data again (exercise A). Run the line to factor respondent\_wall\_type.

Using aggregate, find:

- 1) the average family size per village
- 2) average number of rooms in the dwelling per wall type and village (group on both)

Bonus: sort the second result by village, then wall type
