Aggregating

```
aggregate(africa$pop_2017, by=list(africa$region), FUN=mean, na.rm=TRUE)
```

```
Group.1 x
1 central 17915179
2 east 23673746
3 north 38598350
4 south 12770885
5 west 23284215
```

Exercise

Read in the SAFI data again (exercise A). Run the line to factor respondent_wall_type.

Using aggregate, find:

- 1) the average family size per village
- 2) average number of rooms in the dwelling per wall type and village (group on both)

Bonus: sort the second result by village, then wall type
