Regression

```
africa <- read.csv("data/africadata.csv")

lm(road ~ pop_2017 + gdp_2017, data=africa)

Call:
lm(formula = road ~ pop_2017 + gdp_2017, data = africa)

Coefficients:
(Intercept)      pop_2017      gdp_2017
  1.517e+04     3.084e-04     9.920e-07
```

Regression

```
lm(y ~ x1 + x2, data=data_frame_name)
```

Intercept (constant) term gets added

Don't need to quote or prefix column names
