Source

```
source("my_functions.r")
```

Read and run other code

Creates objects, doesn't create output

Exercise

```
fahr_to_kelvin <- function(temp) {
  kelvin <- ((temp - 32) * (5 / 9)) + 273.15
  return(kelvin)
}
```

Write `kelvin_to_fahr` to reverse the above function

Test your function by calling `fahr_to_kelvin`, then `kelvin_to_fahr`
