Subset

Subset for selecting rows or columns

```
subset(data.frame,
        subset=condition for rows to keep,
        select=columns to keep)
```

Don't have to quote variable names or prefix with name of the data frame

Subset

```
subset(safi,
        subset=village=="God",
        select=c(village, years_liv, rooms))
```

```
   village years_liv rooms
1      God         4     1
2      God         9     1
3      God        15     1
4      God         6     1
5      God        40     1
6      God         3     1
7      God        38     1
11     God        20     1
12     God        20     3
```
